

DevOps Interview Questions

Linux Basics

- What is Linux?
 - Explain the basic Linux commands you know.
 - Which Linux distributions have you worked with?
 - Which organization owns CentOS?
 - What is the grep command used for?
 - What happens if you run vim filename and the file does not exist?
 - How do you check the process?
 - How can you filter the init process?
 - How do you check memory usage in Linux?
-

CI/CD Pipeline

- What is a CI/CD pipeline?
 - Explain the CI/CD pipeline in your project.
 - How many stages are in your pipeline, and what are they?
 - Explain your project.
-

Docker & Containers

- What is Docker?
 - What is a Container?
 - What is a Container Image?
 - Can you explain how a Docker image is created in your project?
 - What is a Dockerfile?
 - What is the difference between a Container and a Virtual Machine?
 - In terms of security, what will you prefer: Docker container or Virtual Machine, and why?
-

Virtualization & OS Concepts

- What is Virtualization?
 - What is a hypervisor?
 - What are the types of hypervisors?
 - How many layers are in the OSI model?
-

Kubernetes

- What is Kubernetes?
- Explain Kubernetes architecture.
- What is the difference between Docker and Kubernetes?
- What is Deployment in Kubernetes?
- What is Service in Kubernetes, and why is it used?
- What is Secret in Kubernetes?

AWS Cloud

- Which AWS services have you used?
- What is EC2?
- What is VPC?
- What is the difference between a private subnet and a public subnet?
- What is AWS Lambda?
- What did you work on using AWS Lambda?
- What is a load balancer?
- How many types of load balancers are there in AWS?
- At which level do ALB and NLB work?
- What is Auto Scaling?
- Which type of Auto Scaling have you used in your project?
